

Lab 2: Bug Tracker Evidence

Sujay Hegde | PES1UG24CS478 | BPS #47

Domain & SSL Certificate Expiry Alert System

The backlog shows four defects BB-1 through BB-4, all in To Do with Medium priority. The detail view records the missing 15-day SSL expiry alert. These are lab defect records, not evidence of a tested implementation.

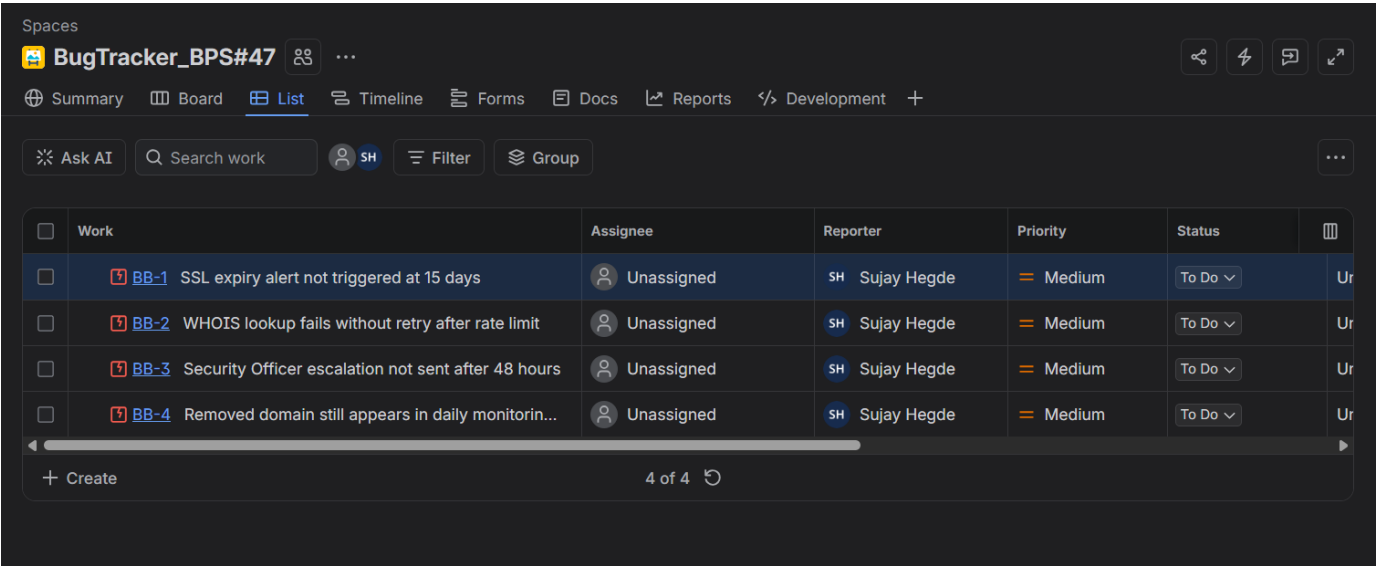

Source supplied by the student: SUJAY_HEGDE_PES1UG24CS478 - #BPS47 - BUG REPORT (1).pdf

Screenshots were extracted from the source PDF at their original pixel dimensions. This report updates student metadata and uses captions limited to the captured evidence. The original report is retained under [source_reports/](#).

SSL expiry alert not triggered at 15 days

✓ Description

Problem:

The system does not trigger the required SSL certificate expiry alert when a certificate is 15 days away from expiration.

Expected:

An alert should be generated at 30, 15, and 3 days before expiry.

Actual:

The 15-day alert is not generated.
