Lab 2: Jira Bug Tracking Project Report

Course: Software Engineering Lab 2 - Problem Statement: Domain & SSL Certificate Expiry Alert System

1. Bug Tracker Space & Defect Backlog View

Project:
BugTracker_BPS#47

Description: Created a dedicated Bug Tracking workspace in Jira named BugTracker_BPS#47 for the Domain & SSL Certificate Expiry Alert System. Four defects were reported covering SSL expiry alerts, WHOIS failure handling, alert escalation, and monitored-domain management.

Lab 2: Jira Bug Tracking Project Report

Domain & SSL Certificate Expiry Alert System

2. Detailed Defect Inspection View (BB-1)

Priority: Medium - Status: To Do

Description: In-depth defect record for BB-1 showing that the required SSL certificate expiry alert is not triggered when a certificate is 15 days away from expiration.

SSL expiry alert not triggered at 15 days

+

...

≡+

▼

Description

Problem:
The system does not trigger the required SSL certificate expiry alert when a certificate is 15 days away from expiration.

Expected:
An alert should be generated at 30, 15, and 3 days before expiry.

Actual:
The 15-day alert is not generated.

3. Defect Details

Observed in Jira

Problem	The system does not trigger the required SSL certificate expiry alert when a certificate is 15 days away from expiration.
Expected	An alert should be generated at 30, 15, and 3 days before expiry.
Actual	The 15-day alert is not generated.

4. Defect Tracking Notes

The four reported defects remain in the To Do state in the captured Jira list. The detailed BB-1 view documents the problem, expected behavior, and observed actual behavior exactly as entered in Jira.
